RepRisk becomes ESG provider on AWS Data Exchange

Alternative data community to benefit from RepRisk ESG risk data through AWS Data Exchange

RepRisk, a leading ESG data science firm that combines machine learning (ML) and human intelligence to identify and assess ESG risks, now delivers RepRisk's Data Feed on AWS Data Exchange.

The inclusion of RepRisk data in AWS Data Exchange, a service that makes it easy to find, subscribe to, and use third-party data in the cloud via Amazon Web Services (AWS), allows subscribers such as data analysts, portfolio managers, and quantitative investors, streamlined access to relevant, daily-updated information on ESG and business conduct risks for financial decision-making.

“We are thrilled to be working with AWS and are proud to be one of the first ESG data providers on AWS Data Exchange,” said Alexandra Mihailescu Cichon, Executive Vice President of Sales and Marketing at RepRisk. “RepRisk is committed to providing transparency. Our dataset serves as a reality check for how companies conduct their business around the world – do they walk their talk when it comes to human rights, labor standards, corruption, and environmental issues? Joining AWS Data Exchange, a service that enables the discovery and procurement of third party data sets, is a significant milestone in that work – and we are proud to be making in-roads for ESG in the alternative data landscape.”

RepRisk offers quantitative risk analytics and proprietary metrics for more than 150,000 public and private companies, and from every sector and market across the globe. This data serves leading financial institutions and corporates in their due diligence and risk management processes across their operations, business relationships, and investments.
