

15 years of growth

2006

The list that started it all

RepRisk starts a list of just 100 companies for UBS, who wanted more information than their existing due diligence provided. Thus, spurring RepRisk's work to assess ESG risks and provide daily-updates – and the launch of the ESG Risk Platform

“ UBS has been working with RepRisk data since 2006. The integration of RepRisk data into our existing compliance and risk processes started in 2011 and has been refined over the last decade. It is a key part of the Environmental and Social Risk due diligence process in UBS. As requirements regarding the management of ESR issues grow, we are looking into new ways to further evolve, automate and standardize our assessment process with the help of this powerful database. ”

Alexander Seidler, UBS Environmental and Social Risk APAC

Supporting a nation

World's largest sovereign wealth fund uses RepRisk ESG data
